Subject: Sysadmins Speak.

Microsoft continues to be a highly destructive force in the IT business. There is a subtle for of monopolistic leverage they use that is rarely discussed.

Because management never sees any OS but the one on their desktop, they are confused when told that certain services and or servers could perhaps better be run on another OS. They and most of the rest of the non technical world is simply unaware that there is an alternative.

They continue to build incompatibilities into their own products to force user to 'upgrade'. It is next to impossible to buy a Laptop without Windows.

They are now trying to make discussion of security issues and bugs in their products a criminal act.

They need to be stopped before they ruin the the internet, which they are well on their way to turning into they own DMCA protected Microsoft Disney Land.
